

STRUCTAL

Building Better Bridges

Bridge No. 336 Chicago, Illinois

The Belt Railway Company of Chicago, the largest intermediate switching terminal in the United States, entrusted Structural-Bridges with the project to replace the existing span above 26th Street in Chicago, Illinois. The fabrication of this span, which was delivered fully painted, required 200 tons of steel.

Direct field delivery by train was made possible thanks to Structural-Bridges' in-plant rail loading bay.
