

STRUCTAL

Building Better Bridges

Mississippi River Bridge Ottawa, Ontario

Structal-Bridges' superior quality products helped it to obtain a contract for two identical bridges at its Quebec City facility. The span above the river was erected using barges.

Structal-Bridges' team of experienced detailers use the latest tools to create large-scale projects on tight schedules. Exceptional service allowed the company to stand out from the competition and it has gained recognition throughout the Canadian market and more recently in the eastern United States.

Building Better Bridges
